

## PDA Software for Use With UniSpec

PP Systems has developed new software that will allow you to operate your UniSpec from a PDA. The software has been developed and thoroughly tested on a Dell Axim PDA that features Microsoft Windows Mobile OS v5 and a virtual VGA (640 x 480) resolution screen.

- Powerful software
- User friendly
- On-line help system
- Full color, highly readable LCD even in full sunlight
- Simple mounting system

The combination of the PDA and software provides all the functionality of the original system (HP Palmtop and software) plus it offers:

- Greater speed
- Greater data storage capacity
- Easier communication and greater flexibility with Windows desktop computers

The software may run on other manufacturer's PDA's that offer the same specifications, but operational details and capabilities may be slightly different.
